

Pleasure Island Revitalization Lake Buena Vista, Florida

The project goal was to provide a more direct connection from the Downtown Disney West Side Entertainment District onto Pleasure Island and provide improved access and guest circulation within the Pleasure Island area. The new design elements included a new sloped bridge element, new hardscape and grading for improved access into the Pleasure Island retail and entertainment venues, new site lighting, new site furnishings and a new landscape planting design. MSI provided master planning as well as schematic and design development for site grading, hardscape, new bridge design intent, site lighting, site furnishings and landscape planting design. The project was completed in February 2007.
